Overview of agrometeorological conditions during the 2024 growing season / Tarasova L.L., Klang P.S., Pavlova A.V., Sumerova K.A. // Гидрометеорологические исследования и прогнозы. 2025. № 3 (397). С. 146-162.

The paper investigates main weather anomalies of the 2023/2024 winter and the 2024 summer. It was found that crop formation conditions during this period were significantly worse than in the recent decade. Due to these anomalies, the yield did not meet expectations.

Keywords: drought, waterlogging of soil, light frosts
